

# DOLLY PANDEY

Data Analyst | Python • SQL • Tableau • EDA • AI Automation | IIIT Bangalore EPGP  
dollypandey221@gmail.com | +91 8957879301 | [LinkedIn](#) | [GitHub](#) | [Kaggle](#)

## PROFESSIONAL SUMMARY

Data Analyst with hands-on experience in KPI tracking, funnel analytics, data pipeline development, and insight generation for cross-functional stakeholders. Proficient in Python, SQL, Tableau, Power BI, and Google Analytics. Experienced in EDA, predictive modeling, ETL processes, and AI-powered automation. Adept at translating business requirements into analytical problems and delivering actionable, data-driven recommendations. Seeking roles in Data Analytics or Data Science with a focus on driving measurable business impact.

## PROFESSIONAL EXPERIENCE

**Data Science Intern** | Devot AI | Nov 2025 – May 2026

### Data Analytics & KPI Operations

- Tracked and analyzed KPIs including CTR, organic traffic trends, and keyword ranking metrics across multiple client properties using Google Search Console and Google Analytics, delivering actionable insights to stakeholders.
- Defined and monitored content engagement metrics across 12+ topic clusters, identifying performance trends and optimizing content strategy based on data-driven insights aligned with business goals.
- Performed anomaly detection on search performance data to identify keyword cannibalization issues; implemented corrective strategies that improved site crawlability and organic discoverability.
- Managed and tracked lead funnel performance through AI-powered outreach campaigns (Smartlead AI), monitoring conversion rates, engagement metrics, and email sequence performance across the full lead lifecycle.
- Developed automated data pipelines using n8n for multi-source data integration, orchestrating ETL workflows across tools to streamline data extraction, transformation, and reporting processes.
- Collaborated with cross-functional teams including campaign managers and content leads, maintaining clear documentation of datasets and processes and presenting data-driven findings in narrative format aligned with business objectives.

### Web Development & Implementation

- Built and maintained production-level website features using Next.js, React, and Tailwind CSS, contributing to 3+ live deployments.
- Integrated third-party REST APIs and managed Git workflows including branching and pull requests in a collaborative team environment.

**GenAI-Powered Data Analytics Intern** | Tata iQ – Forage (Remote) | June 2025

- Performed exploratory data analysis (EDA) using GenAI tools to identify data quality issues, outliers, and risk indicators across large datasets.
- Structured and prepared datasets for predictive modeling pipelines, applying data wrangling and feature engineering techniques to support insight generation.

## SKILLS

**Programming & Querying:** Python, SQL (window functions, CTEs, query optimisation), JavaScript, VBA, Regex

**Data Analytics:** EDA, KPI Tracking, Funnel Analysis, Cohort Analysis, Anomaly Detection, A/B Testing, Statistical Analysis, Inferential Statistics, Hypothesis Testing

**Data Engineering:** Data Modeling, ETL Pipelines, Data Wrangling, Feature Engineering, Data Validation, n8n Workflow Automation

**Visualisation Tools:** Tableau, Power BI, Metabase, Matplotlib, Seaborn, Google Analytics, Google Search Console

**Machine Learning:** Regression, Classification, Clustering, NLP, Predictive Modelling, Scikit-learn, Pandas, NumPy

**AI & Automation:** Claude, ChatGPT, OpenAI Codex, Cowork, Smartlead AI, n8n, Prompt Engineering

**Databases:** MySQL, MS SQL Server

**Dev Tools:** Git, GitHub, Jupyter, Google Colab, VS Code, Trello

**Cloud & Big Data:** AWS (EC2, S3, Cloud Fundamentals), Apache Spark (RDDs, Structured APIs), Hadoop, Azure Fundamentals

**Other:** Excel, Google Sheets, Macros, Microsoft Office

---

## EDUCATION

---

**Executive Post Graduate Programme (EPGP) in Data Science** | IIIT Bangalore | Nov 2024 – Nov 2025 | GPA: 3.8 / 4.0  
| [View Certificate](#)

B.Sc. | Shree Agrasen Kanya PG College | Jun 2020 – May 2023 | 64.08%

---

## PROJECTS

---

**Namma Yatri Case Study – Data Analysis & Visualization** | IIIT Bangalore | [Github](#)

- Conducted end-to-end analysis of Namma Yatri ride-hailing data — cleaning, joins, and feature engineering — to uncover demand patterns, cancellations, payment preferences, and zone-level performance trends, and built an interactive Tableau dashboard with filters for time, payment method, and zone.
- Delivered separate technical and business-facing reports translating findings (e.g., driver vs. customer cancellation gaps, peak commute-hour demand, top-performing zones) into operational and marketing recommendations.

Tools: Tableau, PowerPoint, MS Word

**Supply Chain Analytics – Capstone Project** | IIIT Bangalore | [Github](#)

- Designed a live tracking system for an open-pit mine's digger–crusher supply chain, cleaning and preparing raw operational data using MySQL Workbench.
- Built dashboards to track inventory levels and key operational metrics in near real time, and presented findings and recommendations to a simulated technical audience via a concise slide deck.

Tools: MySQL Workbench, Tableau/Power BI, PowerPoint

**Credit Card EDA** | [Github](#)

- Performed EDA and data wrangling on a credit card dataset to uncover customer spending patterns, segment-level trends, and risk indicators — delivering visualised insights for business intelligence reporting.
- Identified data quality issues (missing values, outliers) and applied cleaning techniques to prepare a validated analytical dataset.

Tools: Python, Pandas, Matplotlib, Seaborn

**Bike Sharing Demand Prediction** | [Github](#)

- Built a linear regression model with feature engineering to predict daily bike rentals, achieving strong performance through iterative pipeline optimisation and feature selection.
- Tracked model KPIs (RMSE,  $R^2$ ) across iterations and presented findings with data-driven recommendations for operational planning.

Tools: Python, Scikit-learn, Pandas

**SQL – RSVP Movies Case Study** | [Github](#)

- Derived actionable business intelligence insights from a large movie dataset using complex SQL queries, subqueries, and window functions — structured as a stakeholder-ready analytical report.

Tools: MS SQL Server

---

## CERTIFICATIONS

---

- Data Science Programming Bootcamp – upGrad (Python, Pandas, SQL) | [View Certificate](#)
- Intro to Machine Learning – Kaggle | [View Certificate](#)
- Tata GenAI Data Analytics Simulation – Forage | [View Certificate](#)
- Microsoft Azure Fundamentals – Microsoft Learn (Cloud Concepts, all module assessments passed) | May 2025
